EDUCATION

BACHELOR'S DEGREE

Electrical and Telecommunications Engineering — Multimedia University of Kenya
2023 - Present

Units:

Probability and statistics.
Programming for Engineers.

WORK EXPERIENCE / PROJECTS

Data Science

- Performed data analysis with Python libraries (NumPy, pandas, matplotlib) to gain clear insights and uncover trends in large, complex datasets. [EDA](#)
- Developed interactive visualizations and dashboards to communicate findings and drive data-driven decisions on high-volume projects.
- Implemented SQL queries and machine learning models to extract, clean, and predict outcomes from real-world data. [SQL](#)
- Applied statistical techniques to strengthen mathematical understanding and improve model accuracy and confidence intervals
- Analyzed real-world datasets in a collaborative case study to translate raw sensor data into actionable insights.
- Contributed to a power source detection research project to enhance grid-reliability analytics and support energy access solutions. [Case study](#)

Certifications

- Programming crash course - [Certificate](#)
- Python Course - [Certificate](#)

COMMUNITY ENGAGEMENT & ACHIEVEMENTS

- Earned acceptance into the KamiLimu cohort 9 mentorship program(3.8 % acceptance rate, 1 of only 40 mentees selected) and advanced personal and professional development through intensive sessions on data science, innovation, and community impact.
- Maintained a public GitHub portfolio of data science projects, including exploratory data analysis, machine learning models, and reproducible Jupyter notebooks demonstrating Python (pandas, NumPy, matplotlib) workflows.
- Led end-to-end data projects from problem definition and data cleaning to modeling and visualization, documenting methods and results for reproducibility.
- Supported peers in online data science communities by troubleshooting Python data analysis pipelines, advising on SQL queries, and explaining statistical concepts.
- Created detailed READMEs and notebooks explaining data preprocessing steps, feature engineering, and model evaluation metrics to make projects easily reproducible for other data scientists.
